

# Computer Engineering Experts Nor-Tech Deliver Top-Notch Integration Services

February 02, 2022 at 11:06 AM EST

**MINNEAPOLIS - Feb. 2, 2022** -- [Nor-Tech](#), the leading experts on software and hardware integration for high performance clusters and workstations, has one of the most highly respected technology

engineering teams in the world—capable of everything from minor adjustments that solve big problems to complex hardware and software integrations that other engineers won't touch. Areas of specialization include a full range of services for Linux HPC clusters, low latency networks, storage and visualization, and support for NICE DCV and EnginFrame.

Nor-Tech's engineering team, doesn't have the turnover that most competitors have—everyone on the team has been with Nor-Tech more than 10 years. Aside from expertise and experience, a primary benefit to clients is that the same engineers that integrate the technology are easily accessible for support long after deployment.

Among the engineering team's major accomplishment are continued involvement in two Nobel Physics Prize Projects; selection by NASA to showcase capabilities at a Washington, D.C. event for legislators; and the catalyst for CRN naming the company a Top Data Center Infrastructure Builder.

This is what one client had to say:

Computational Modeling Technology Manager at a National Manufacturing Innovator, "Nor-Tech invited me to their facility and I was able to see how the components performed with the software on our existing cluster. That provided me with the assurance that we would be able to operate and maintain the new cluster without issues. ROI can be hard to pin down, but not in this case. With the dramatic increase in speed, we can get the answer a design engineer needs in a matter of hours rather than days. Quality equipment that is easy to deploy, consistently good customer service, a competitive price, and a quick turnaround on the order—that's all we were hoping for. We received that and more."

Nor-Tech Executive Vice President Jeff Olson said, "We are very proud of our engineering team at Nor-Tech. Time and again I have seen them go the extra mile for our clients—while a lot of companies will say that, our engineers continually demonstrate the capabilities, resources and demeanor to deliver outstanding technology every time."

All of Nor-Tech's high performance technology is developed by Nor-Tech in Minnesota and supported by Nor-Tech around the world. The company is headquartered in Burnsville, Minn. just outside of Minneapolis. Nor-Tech holds the following contracts: Minnesota State IT, GSA, University of Wisconsin System, and NASA SEWP V.
